

3rd Annual Conference
Association of the Socio-Economic Development Studies

On
Globalization, Growth and Sustainability
(15 - 16 November, 2019)

Organised by: Department of Economics
Dr. Shakuntala Misra National Rehabilitation University, Lucknow

About the Association of the Socio-Economic Development Studies (ASEDS):

ASEDS is a registered academic society. It has organized jointly several seminars, conferences, research methodology courses, and other such meetings. It has above 300 life members, several donors members and many annual members. The members are both faculty and research scholars of social science discipline from India and abroad. BBAU and ASEDS jointly publish International Journal of Social Science and Development Policy-a semi-annual journal. For details visit www.aseds.in and www.bbau.ac.in

The mission of ASEDS is investigation relating to improvement of the economic and social conditions of life, and such related development issues of Indian economy in general and other emerging and advanced economies in particular

About the University:

Dr. Shakuntala Misra National Rehabilitation University, established by Government of Uttar Pradesh in the year 2008, is highly innovative that proactively brings together under one umbrella-the academia and social responsibility. The potent synergies of this blending open up huge possibilities for translating ideas into action, taking science to soil, and lab to land. First of its kind in India, the University not only offers accessible and world class higher education to all but also addresses the educational needs of the physically challenged in a seamless and sensitive academic environment.

Mission of the University:

University is committed to improve the delivery system through service initiatives, institutional and human resource and build partnerships to provide high quality, affordable, accountable, responsive & integrated services to the students, alumni, placement partners and all other stakeholders as one of the best centre for higher learning especially for differently abled ones.

To prepare professionals especially disabled to succeed as leaders, professionals, informed consumers, responsible citizens, and life-long learners; reach out to an expanded audience of learners through residential and distance education, utilizing a variety of learning media and technologies; promote human and intellectual diversity by providing equal access and opportunity to the challenged population; contribute to the welfare and advancement of challenged people throughout the world.

About the Department:

The Department of Economics was started in the Session 2011-12. The focus of the UG, PG and Ph.D. courses being run by the department is on inter-disciplinary and multi-disciplinary approaches in realm of teaching, research and extension.

Weather in Lucknow: In the month of November normally the weather in Lucknow (U P) is pleasant and the temperature ranges between from 22-25 ° C to 27-29 ° C day time and 14-19 ° C during night.

Concept Note:

The term globalization has only become commonplace in the last three decades, and academic commentators who employed the term as late as the 1970s accurately recognized the novelty of doing so (Modelski 1972). At least since the advent of industrial capitalism, however, intellectual discourse has been replete with allusions to phenomena strikingly akin to those that have garnered the attention of recent theorists of globalization. Covering a wide range of distinct political, economic, and cultural trends, the term “globalization” remains crucial to contemporary political and academic debate. In contemporary popular discourse, globalization often functions as little more than a synonym for one or more of the following phenomena: the pursuit of classical liberal policies in the world economy, the growing dominance of western forms of political, economic, and cultural life, a global political order built on liberal notions of international law, the proliferation of new information technologies, as well as the notion that humanity stands at the threshold of realizing one single unified community in which major sources of social conflict have vanished. It would not be wise to cover all regions of the world with the same brush. There is a subset of countries in the developing world that are growing faster than the rest and are tending to converge towards the developed world, such as China, India, Thailand, and Vietnam. These countries are poised for growth, so you could say “the check is in the mail.” They just need to keep the growth process going and they face a certain set of challenges in doing so. In the economic growth process, countries in the developing world do not grow by making more of the same. In fact, more of the same is not the way rich countries grow either. In the process of economic growth, countries change what they do. They change what they’re good at. They evolve their comparative advantage. So while Israel used to export oranges, now they export IPOs of high-tech firms. Turkey used to export olive oil. Now they export cars and electronics. They do this because they acquire new productive capabilities; they acquire know-how and technology that allows them to do more diverse and valuable things.

The idea of sustainable development grew from numerous environmental movements in earlier decades. Summits such as the Earth Summit in Rio, Brazil, 1992, were major international meetings to bring sustainable development to the mainstream. However, the record on moving towards sustainability so far appears to have been quite poor. The concept of sustainability means many different things to different people, and a large part of humanity around the world still live without access to basic necessities. Agenda for Sustainable Development is an ambitious, universal and holistic agenda. UNDP promotes an integrated approach that tackles the connected issues of multidimensional poverty, inequality and exclusion, and sustainability, while enhancing knowledge, skills and production technologies to enlarge peoples' choices, reduce risks and sustain development gains.

The challenges are to link these three variables and evaluate the trend because of emerging situation and crisis.

Sub themes:

- Poverty, inequality and exclusion: Poverty, destitute, inequality in all of its manifestations and inclusion of one and all in the main stream of economic life to earn a decent living are challenges before the planners and policy makers. The chasm is between the haves and the have nots, as many of the experts feel, is the real issue. Much of the water has flow in the Ganges since we embarked upon planned structured mechanism to address the problem of poverty. The numbers swelled, percentage reduced when it comes to poverty and the inequality in the opportunities-basis amenities (safe drinking water, sanitation, education etc.), in the matters of employment, income etc., makes one feel that inclusion of people belongs to the vulnerable section of Indian social fabric is conspicuous by its absence.
- Human Trafficking and Development: The issue of human trafficking is a matter of concern. It is oppressive. The illegal ways of transporting people-especially the vulnerable section of the society that comprises of children, women and the forced labourers, for exploiting their situation is a matter of grave concern for one and all this civilized world.
- Insecured Migration, Market, and State: It is a well established documented fact that people migrate for their well being under duress or for career. The exodus of humans from one place to the other by crossing boundaries by means not recognized by the law of the land for economic well being or subsistence has become a big issue in the contemporary economic world.
- Institutional Challenges and Economic Growth: Governance is an important and effective component when it comes to the holistic benefits of the programmes and policies reaching at the lowest ebb of the social framework. Experts and institutions of repute have moved from governance to good governance. In a country like India the parameters of good governance are of immense significance for ensuring the fruits of the economic growth and economic development to be inclusive.
- Sustainable Technological Advances in Global Scenario: In the contemporary economic scenario there is an emphatic emphasis on technology which facilitates sustainable development.
- Sustainable Agricultural Development: The growing disparity in income and intent of the farming community to quit farming is a matter of concern. The recent initiative of the Government of India to enhance agricultural well being by 2022 is significant: (i). Post Production Logistic Support. (ii). Market Support System (iii). Degradation of Natural resources. (iv). Climate Change. (v). Agro-ecological Based Agriculture. (vi). Agro-Biodiversity for Smart Ecological Services. (vii). Watershed Management. (viii). Rainfed Agriculture: challenges & strategies. (ix). Organic Farming (x). Role of Krishi Vigyan Kendras & Agricultural Universities.
- Decent Living for the Persons with Disability: The Persons with Disability Act 2016 is an important initiative in the direction to identify and sensitize people about the differently abled persons. The most significant aspect of it enables them to be an integral part of the society and the societal perception towards them needs to be changed.
- Administrative Challenges of Politics & Effectiveness of Policies: Administration and the government plays a decisive role in the effective and efficient execution of the policies and programme. Administrative efficiency is vital to set the trajectory of the reach of the programmes to the poor and it also has a prominent role in expanding the choices. One may realize the economic performance of different states in India & the world over and attribute the success and challenges of the respective policies to the political and administrative set up. Execution of a prudent policy and programme for the well being of the masses is the corner stone or the crux of ensuring the benefits to the poorest of the poor.
- Environment and Sustainable Development: Governance is an important and effective component when it comes to the holistic benefits of the programmes and policies reaching at the lowest ebb of the social framework. Experts and institutions of repute have moved from governance to good governance. In a country like India the parameters of good governance are of immense significance for ensuring the fruits of the economic growth and economic development to be inclusive. Frequent changes observed in the climate and weather conditions across the globe have raised alarming signals among the policy makers vis-à-vis the approach to economic growth and economic development. In a country like India sustainability of efforts to keep balance between economic development and ecological balance is no trivial issue. The Government of India has initiated a number of efforts in this direction

Abstract / Full Paper Submission Guidelines

The authors should adhere to the following for both abstract and the full length paper.

Length	Abstract 500 words (comprising of title, background, justification of work, methodology and expected / obtained findings) Full paper – 5000 to 6000 words
Margin	2.5 cms / 1 inch
Font	Times new roman , 12 point, APA Paper Style
Spacing	1.5
Title page	Title, author(s), affiliation(s), contact details.
Key words	4-5 words

Abstract will be reviewed by the Conference's Review committee. The number of papers that can be accommodated is limited, so please be sure to submit your abstract/full paper early. All peer reviewed papers may be published in International Journal of Social Sciences and Development Policy or edited book from very reputed publisher. All papers should be mailed to rksinha@dsmnru.ac.in and copy to nmpverma@gmail.com, alpana94@gmail.com
